PROFESSIONAL SUMMARY

Computer Information Systems and Technology student at The University of Texas at Dallas, specializing in Enterprise and Banking Systems. Experience auditing high-volume financial documents and processing confidential client assets under institutional compliance standards, paired with independent projects in enterprise identity and access management. Track record of high-accuracy performance in high-volume environments, with technical depth in Linux systems, network security, and embedded systems.

EDUCATION

The University of Texas at DallasMay 2028

Bachelor of Science in Computer Information Systems and Technology, Enterprise and Banking Systems

EXPERIENCE

Remittance Processing ClerkApril 2026 – Present

City Staffing at JPMorgan Chase — Lewisville, TX

- Audit approximately 1,000 high-volume client documents per week to maintain zero-error accuracy in financial recordkeeping.
- Record physical and account-based payments into master ledgers with a 99.4% accuracy rate.
- Process highly confidential financial assets in full compliance with institutional security standards.

Supervisor / Key HolderOctober 2025 – April 2026

Pizza Guys — Plano, TX

- Supervised a team of up to 8 employees to ensure smooth and efficient shift operations.
- Directed problem resolution, cash handling, and store security as a designated key holder.

ProctorAugust 2024 – May 2025

The University of Texas at Dallas — Richardson, TX

- Monitored exams for up to 400 students to enforce strict compliance with testing protocols.
- Deployed remote access and computer monitoring software to uphold academic integrity.

PROJECTS

Self-Hosted Linux Homelab Server

- Provisioned and administer a headless Linux server entirely via SSH and the command line, hosting multiple private dedicated Minecraft servers for concurrent multiplayer use.
- Secured remote access and server exposure using UFW/iptables firewall rules and Tailscale for private networking.
- Currently extending the server to self-host a personal website, managing the stack end-to-end from OS to deployment.

Meridian Trust — IAM/RBAC Demo

Personal Project

- Designed and built a role-based access control system modeling enterprise and banking identity patterns using Python, Flask, and PostgreSQL, with authentication, authorization, and audit logging separated into independently testable layers.
- Implemented an immutable audit log capturing every login attempt and permission check to support compliance review, and containerized the full stack with Docker Compose for reproducible deployment.
- Applied security-conscious design throughout: generic auth error messages to prevent user enumeration and live SQL migrations instead of destructive schema resets.

MyCarRemote

- Built a self-hosted web control interface for an ESP32-powered robot car, serving the UI from the device's own WiFi access point without a companion app.
- Designed a heartbeat-based safety system that auto-stops the vehicle within 800ms of lost connectivity.

ACTIVITIES & LEADERSHIP

Cookout Club, The University of Texas at Dallas

Vice President

- Administered club reservation and payment systems.

CERTIFICATIONS

- Enterprise Architecture | LinkedIn Learning | August 2026

SKILLS

Technical: Python, Flask, PostgreSQL, Docker, Linux Command-Line, UFW, iptables, Tailscale, C++, Arduino/ESP32, Microsoft 365

Domain: Identity and Access Management, Financial Document Processing, Financial Document Security, Ledger Management, Enterprise Architecture

Professional: Compliance and Accuracy, Leadership and Team Supervision
